

AAPM Pain Medicine Fellowship Excellence Award
University of Pittsburgh Medical Center Pain Medicine Fellowship
Pittsburgh, PA (2016): Testimonial

The University of Pittsburgh Medical Center Pain Medicine Fellowship Program is committed to providing evidence-based, safe, patient-centered care. Fellows are part of an interdisciplinary and interactive pain medicine clinical network that ensures high-quality, comprehensive, multimodal pain care. UPMC's advanced electronic resources allow fellows to learn how to capture data efficiently and accurately, using the most up-to-date evidence-based screening and assessment tools. This multidisciplinary program offers services ranging from pain rehabilitation to interventional therapies, affording fellows opportunities to learn from psychologists, physical therapists, occupational therapists, and pain medicine physicians as well as from other disciplines, including neurology, psychiatry, neurosurgery, anesthesiology, palliative care, and rehabilitation medicine.

On behalf of UPMC Pain Medicine, I am honored to accept this award from the AAPM. Our fellowship program strives to provide the type of quality care that is consistent with the AAPM's mission statement. It is our hope to build upon the work that we have done to date, to connect and collaborate with other academic institutions, and to continue to train and attract our nation's top physicians to the field of pain medicine.

Scott Brancolini, MD, MPH
Fellowship Director
Division of Pain Medicine
Department of Anesthesiology
